

EDUCATION

Southeast University

Bachelor of Electronic Science and Technology

2020.09–2024.06

- CHIEN-SHIUNG WU COLLEGE Honorary Degree
- GPA: 3.51/4
- Graduation Project: A

Nanyang Technological University

Master of Electronics

2024.08–2025.06

- CGPA:4.75/5

The University of Tokyo

Master of Electrical Engineering and Information Systems

2025.10–2027.10

- Research Lab: Nomura Lab.
- Research Topic: Machine learning powered computational fluid dynamics calibration for two-phase fluid problem.

PROJECTS & COMPETITIONS

Current Sensor Network Stability & Corrosion Engineering

Graduate Design

2023.12–2024.06

- Partnered with an electricity company to build a stability analysis model for a developing cable current sensing network through Finite Element Method (FEM) simulation using COMSOL.
- Synthesized requirements from the Optical and Core Sensor teams, analyzing how their specific structural designs impacted the overall system's thermal profile and structural integrity.
- Aiming at mitigating corrosion issues, conduct optimization for casing structure geometry with Levenberg–Marquardt and MMA algorithm, reaching 20% performance improvement.
- Wrote Python scripts and connect it to COMSOL service to realize the automation of different model simulation along with the cross-model data joint processing.
- Conference paper accepted by ICEPG 2024.

NLP Language Modeling

Imperial College London Summer School

2022.07–2022.08

- Led a team of 3 to design and implement an NLP model for COVID-19 datasets using PyTorch, achieving a "Distinction" grade and ranking 1st among 13 competitive groups.
- Challenged myself to build my first NLP language model within a condensed timeframe. Implemented word embedding methods using skip-gram and cosine similarity for semantic representation and analysis.
- Directed project lifecycles by coordinating task allocation and facilitating cross-functional brainstorming.

Autonomous Vehicle Development

National Intelligent Vehicle Competition

2022.11–2023.04

- Designed a complex autonomous system integrating hardware circuitry with control algorithms; leveraged dual-domain knowledge to rapidly isolate "error blocks" and hardware-software conflicts.
- Resolved a critical system failure under extreme time pressure by diagnosing a specific diode breakdown, ensuring competition readiness.

PERSONAL

- IELTS: 7; JLPT N2: 143; GRE: 319;
- Interests:
 - Cycling: Member of the Southeast University (SEU) cycling club. Participated in the SEU bicycle relay as a representative of the college and ranked the third in the women group.
 - Running, Fitness, Go, Number Theory, Traveling.
